The latest news on the best community water system above 8500 feet

March 2014

CDPHE

The Colorado Department of Public Health and Environment oversees all Public Water Systems in the State. It was this department that placed our water company under the drinking water enforcement order and led us to replace the filtration system that has served us faithfully for almost 40 years! The good news is that CDPHE are reviewing our Basis of Design Report (BDR) which ran to at least 100 pages and weighed 1lb (yes, Rachel weighed it!). This report is the final step in a three year process.... keep your fingers crossed for an unconditional approval!

Here it is ... almost complete!

Exciting news about our new ultra filtration system, the UF50! As you can see from this week's progress photographs, the system is nearing completion and will be ready for delivery, on schedule, in late April. If you are walking past the Water Plant next Wednesday, you will likely see company president, Jack Barker, conducting his final inspection in preparation for the installation.

Innovative Water Technologies, Inc.

This Rocky Ford based company has real global outlook. It's dedicated research into water treatment and purification has taken it to many countries around the world including, Haiti, Mexico, Nigeria, DR Congo, Burkina Faso, India, Pakistan and Afghanistan. Here in the US, its clients include USFS, NPS, State Parks, US Military, and many Public Water Systems.

The photograph to the left shows the ten filtration units that make up our new system. Each unit filters 5 gallons per minutes and together are engineered to keep pace with our water demands especially during the peak bleeding season.
